

Simrule: AI-assisted review of auto insurance decline rules

Solution architecture. The AI advises; people decide; every step is recorded. Numbers follow the review flow.

Legend

- AI component (advisory): shows Prototype and Production
- Deterministic code (same in prototype and production)
- Human step
- Record

- Human touchpoint: a person validates, overrides or approves
- Accountability control: version stamps, override reasons, sign-off, ownership, audit trail, verified citations, bias and drift monitoring

- Reads the versioned knowledge base
- Review flow (numbered steps)
- Records and feedback loops
